A0-core: the 100 endpoint images of an SDXL + LLaVA loop (replication of Hintze)

Each image is step 99 of 100 for one trajectory; one trajectory per cell, numbered by seed. Hintze's 100 seed prompts and his caption instruction, image-to-caption-to-image, temperature 0.9. Generator Stable Diffusion XL base 1.0 (fp16, 25 steps, 512 px); captioner llava:latest 7B (Q4_0) via Ollama. 67 of 100 endpoints are Hintze's motifs: palatial interiors, gothic cathedrals, village streets.

Run a0_core, 2026-10-18/19, 10,000 trajectory-steps on one RTX PRO 6000. Brad Hinkel, github.com/bradhinkel/ai_to_ai_loops (reports/a0_core.md). Reference: Hintze, AI-to-AI loops, OSF WGDQ4.
